MASTER'S STUDENT | SEEKING DATA ENGINEERING INTERNSHIP (SUMMER 2026)

SUMMARY

Masters student in Information Technology with hands on experience designing **batch data pipelines**, **ETL workflows**, and **BI dashboards** using **Python**, **SQL**, and **PySpark** across **Azure** and **AWS**. Skilled in **data modeling**, **pipeline automation**, and **operational analytics** with hands-on experience in **Databricks**, **Airflow**, and **Power BI**.

EDUCATION

University of Cincinnati

Master of Science in Information Technology

Aug 2025 - Dec 2026

Cincinnati, Ohio, USA

Anna University

Bachelor of Engineering in Electronics and Communication Engineering

Jun 2016 – Nov 2020

TamilNadu, India

SKILLS

Programming & Scripting: Python (Pandas, NumPy, Scikit-learn), SQL, PySpark

Data Engineering: ETL/ELT, Data Modeling, Data Pipelines, Data Warehousing, Data Quality, Schema Design

Big Data & Processing: Databricks, Apache Spark, Snowflake, Delta Lake, Apache Airflow

Business Intelligence: Power BI, Dashboards, Operational Analytics, Data Visualization, Reporting

Cloud & DevOps: AWS (S3, Lambda, Glue, Redshift), Azure (ADLS Gen2, Data Factory), CI/CD, Terraform, Git, GitHub

Tools & Practices: VS Code, Jupyter, Unix/Linux, Agile, Documentation, Version Control

PROJECTS

Security Log Analytics and Threat Detection Platform (Azure)

[Link](#)

- Engineered scalable data pipelines using **Azure Data Factory** and **Databricks** to ingest and process security data from simulated sources.
- Developed transformation workflows with **PySpark** and stored curated datasets in **ADLS Gen2** using Parquet and Delta formats.
- Architected Bronze→Silver→Gold **medallion architecture** to enable operational analytics and support historical reporting workflows.
- Implemented **data validation** checks and monitoring logic to assess pipeline reliability and ensure **data quality** in production.
- Designed operational dashboards to track ingestion latency, throughput, and system health, enabling proactive issue resolution.

Hybrid Healthcare Data Engineering Pipeline (FHIR → Medallion → RBAC)

[Link](#)

- Engineered end-to-end **medallion architecture (Bronze → Silver → Gold)** ingesting **synthetic FHIR R4 JSON bundles** using **PySpark**, with dynamic fan-out automatically generating dedicated Silver tables for all **19 FHIR resource types**.
- Designed a **hybrid ingestion system** combining **PySpark batch processing** and real-time **Kafka streaming via Docker**.
- Modeled a **Kimball Star Schema** with 2 fact tables and 9 dimensions for Claims analytics, using **deterministic MD5 surrogate keys** to maintain referential integrity across all FHIR resource joins.
- Implemented **HIPAA** with PHI hashing and generalization, enforcing **column level RBAC** in a **PostgreSQL** governance layer with Admin and Analyst roles.

WORK EXPERIENCE

Data Engineer | Comcast Corporation | Chennai, India

Aug 2023 – Aug 2025

- Designed and maintained batch data pipelines in **Databricks** and **Snowflake** to process cybersecurity telemetry logs at scale.
- Automated orchestration workflows using **Apache Airflow** to manage ingestion, transformation, and validation across multi-stage pipelines.
- Collaborated with security analysts and cross-functional teams to translate detection requirements into scalable data solutions.
- Built reusable transformation modules and dbt models to standardize data processing logic across multiple sources.
- Documented pipeline architectures, data flows, and operational procedures to support team knowledge sharing and troubleshooting.
- Optimized storage layout and compute performance using **Delta Lake OPTIMIZE and ZORDER**, reducing annual cloud costs by **\$5K**.
- Created ingestion templates and Airflow DAG generators, accelerating onboarding for new data sources by **40%**.
- Monitored pipeline health and data quality metrics, providing timely solutions to resolve data issues and ensure SLA compliance.

Data Engineer | Infosys Ltd. (Microsoft Corporation) | Chennai, India

Jun 2021 – Aug 2023

- Developed ETL pipelines in **Azure Databricks** integrating raw operational datasets into analytics-ready layers in **ADLS Gen2**.
- Converted complex T-SQL stored procedures into **PySpark** jobs, reducing batch processing time by **30 minutes** per run.
- Designed metadata-driven ingestion frameworks in **Azure Data Factory** to support scalable onboarding of new data sources.
- Built REST API ingestion frameworks in Python with retry logic, pagination, and schema validation, accelerating development by **50%**.
- Constructed multi-dimensional **data models** (fact and dimension tables) in Databricks to support BI dashboards and reporting.
- Established automated **data quality** checks using Python to detect schema drift and prevent corrupted downstream analytics.
- Collaborated with business stakeholders to understand reporting needs and deliver accurate, timely analytical datasets.

CERTIFICATION

• **Databricks Certified Data Engineer Professional**

Dec 2025

• **Databricks LakeHouse Fundamentals**

Feb 2024

• **Azure Data Fundamentals (DP-900)**

Mar 2022

• **Azure Fundamentals (AZ-900)**

Jul 2021
